

AI-Assisted Full-Stack Engineering Assess

Developer Name
Evaluator
Date
Role / Main Stack

Area	Criterion	What to Evaluate
AI & SDD Application	Requirement & Specification	Clear spec, assumptions and acceptance criteria before implementation.
AI & SDD Application	Planning & Task Breakdown	Logical technical plan and clear implementation tasks.
AI & SDD Application	AI Usage & Verification	Good AI context, output review, testing and safe usage.
Software Engineering & Full-Stack	Engineering Foundations	Core design, separation of concerns, validation, errors, Git, testing and debugging.
Software Engineering & Full-Stack	Backend / API / Database	Backend flow, APIs, business logic, validation and data handling.
Software Engineering & Full-Stack	Frontend & End-to-End Flow	Components, forms, state, API integration and full feature flow.
Productivity		
Quality & Understanding	Correctness & Maintainability	Correct solution, readable structure and maintainable code.
Quality & Understanding	Testing, Security & Edge Cases	Tests, failure scenarios, validation, security and edge cases.
Quality & Understanding	Technical Understanding & Ownership	Explains decisions, debugs, adapts the solution and avoids blind AI dependency.
Assessment Summary		
AI & SDD Application		0
Software Engineering & Full-Stack		0
Quality & Understanding		0
Total Score		0
Final Classification	Foundation Improvement Required
